The Essence of Research Methodology Jan Jonker, Bartjan Pennink, 2010-03-10 Methodology is the field which is indisputably complex. In the academic world, it is often said to be important, yet in everyday academic practice, it is not always treated accordingly. In teaching, methodology is often a mandatory course. Usually, it consists of learning how to adopt several common approaches when doing research, and how to conceive a research design (often leading to a survey). This usually leads to collecting data on a modest scale and - when the opportunity arises - analysing the data with the help of some statistics. Ask the students of their opinion at the end of such a course and they tend to heave a deep sigh of relief and say, "I have got through it." Then their real courses start again, in which methodology often does not play a role at all. We are of the opinion that writing-off methodology in this way is a real pity. It ignores the valuable role that methodology should play in academic teaching as a whole. Here, methodology is presented as a form of thinking and acting that, while obviously entailing research work, can also include the design and change of organisations. This broad approach has been purposefully chosen, as it is almost obvious from research and graduation projects that the students do not really have a clue what methodology involves and, therefore, wasting their time by producing work that has a little quality.

*Business Research* Jill Collis, Roger Hussey, 2003-07-04 *Business Research* provides a clear and practical guide for undergraduate research methods courses and individual research projects at both undergraduate and postgraduate level. *Essays on Research Methodology* Dinesh S. Hegde, 2015-06-03 The book presents a collection of essays addressing a perceived need for persistent and logical thinking, critical reasoning, rigor and relevance on the part of researchers pursuing their doctorates. Accordingly, eminent experts have come together to consider these significant aspects of the research process, which result in different knowledge claims in different fields or subject areas. An attempt has been made to find a common denominator across diverse management disciplines, so that the broadest range of researchers can benefit from the book. The topics have been carefully chosen to cover problem formulation, contextualizing, soft & hard modeling, qualitative and quantitative analysis and ethical issues, in addition to the design of experiments and survey-based research. The distinguishing feature of this book is that it recognizes the diverse backgrounds of scholars from different interdisciplinary areas as well as their varying needs with regard to modeling, observations, measurements, aggregation, data analyses, etc. After all, researchers are expected to deepen our understanding, expand on existing information, introduce fresh insights, present new evidence and/or disprove accepted theories, hypotheses etc. More importantly, the book cautions against the over-reliance on software packages and mechanical interpretation of results based on the size, sign and significance of the coefficients obtained. Instead, the focus is on the underlying theories, hypotheses and relationships and on establishing new ones. In doing so, due care is taken to clearly enunciate what exactly constitutes a knowledge claim and what is methodology as distinct from methods, tools and techniques.

**Designing an Efficient Management System** Tanachart Raoprasert, Sardar M. N. Islam, 2010-04-15 1. 1 Background of the Study: Efficiency in Cross-Cultural International Business Management Efficient business management is crucial in achieving corporate (national or international/multinational) goals such as higher value, comprehensiveness, corporate governance, etc. Efficient business management can be achieved by resolving agency problems existing among different stakeholders in corporations. In international business, agency problems may exist between managers, owners, staff, and other stakeholders who come from different cultures. Therefore, there is a need in designing efficient management of international business by influencing the factors (the convergence factors) which cause differences in the interests and cultures of different stakeholders. International business refers to all commercial transactions between two or more nations. Because it comprises a large and growing portion of current world business practice, international business has received considerable attention in academic research (Daniels and Radebaugh 1998). International business differs in important ways

from business conducted within national borders, and poses additional challenges to managers and investors in foreign countries (Mahoney et al. 1998). In this context, Black et al. (1999) state that effective management is increasingly recognized as a key determinant of success or failure, arguing that the success of international business in multinational companies depends most significantly on the quality of management systems (Stroh and Caligiuri 1998). As international business involves people from different cultures, every business function including managing a workforce, marketing output, and dealing with regulators, has the potential to involve cross-cultural problems (Zineldin 2007).
